ARYAN PANWAR

Business Analyst | Salesforce | Requirements & Process Analysis

Noida, UP, India | +91-7817060230 | aryanpanwar12311@gmail.com | linkedin.com/in/aryan-panwar1 | github.com/Aryanpanwar10005 | aryanpanwar.in

SUMMARY

Business Analyst Intern at Cloud Ingenious, a Salesforce consulting partner, supporting delivery from the first stakeholder workshop to user acceptance testing: requirements gathering, business requirement documents, user stories, Salesforce data modelling and as-is / to-be process mapping on client and internal projects. Brings end-to-end product delivery experience from four self-built projects, and practical fluency with generative AI tools. B.Tech in Electronics and Communication Engineering, 2026.

CORE SKILLS

Business Analysis: Requirements Gathering · Stakeholder Workshops · Business Requirement Documents (BRD) · User Stories & Acceptance Criteria · As-Is / To-Be Process Mapping · Gap Analysis · UAT Support

Salesforce & Delivery: Salesforce Data Modelling · Sales Cloud · Nonprofit Cloud · Agile / Scrum · Jira · Confluence · Stakeholder Management

Data & Tools: SQL · Microsoft Excel · Google Analytics 4 (GA4) · PostHog · Funnel Analysis · Python & pandas (analysis) · Generative AI Tools

PROFESSIONAL EXPERIENCE

Business Analyst Intern — Cloud Ingenious (Salesforce Consulting Partner) Noida, UP *Jun 2026 – Present*

- Supports Salesforce implementation projects from stakeholder workshops to user acceptance testing: requirements gathering, business requirement documents, user stories with acceptance criteria, and as-is / to-be process maps.
- Identified that job applications from the company website were re-keyed into Salesforce by hand; designed a careers-page-to-Salesforce capture workflow with HR as the stakeholder, defining the data model and intake flow that remove the manual step.
- Designed the Salesforce data model for a Nonprofit Cloud engagement and presented the end-to-end business process to the delivery team, revising the design after senior review and before build.
- Mapped the firm's internal delivery process into a single as-is reference, surfacing hand-off gaps between stages for the process owners.

Instrumentation Intern — Indian Potash Limited Distillery & Co-Gen Unit, Rohana Kalan, UP *Jun – Aug 2025*

- Calibrated sensors across boilers and plant-control systems in a live distillery and co-generation unit; converted process data into documentation that operations staff used for predictive-maintenance decisions.

PROJECTS

- **FitWardrobe** — AI wardrobe styling application, Android and web | fitwardrobe.me — Framed the problem as daily outfit retrieval rather than closet organisation; scoped on-device image recognition with LLM outfit generation so user photos never leave the device. 20,800 Google Search impressions and 315 clicks (1.5% CTR) in six months with no paid spend.
- **SEO & GEO Optimizer** — open-source npm package for AI-search visibility | npmjs.com/package/seo-geo-optimizer — Identified that AI coding assistants give outdated SEO advice; designed a 14-phase workflow with human-in-the-loop validation for AI IDEs. 500+ npm downloads, 13 GitHub stars and 3 forks with no paid promotion.
- **Trading Data Analysis** — Analysed 211,000+ trade records against the Bitcoin Fear & Greed Index in Python and pandas, surfacing market-regime and trader-performance patterns | github.com/Aryanpanwar10005/primetrade-ds-assignment
- **Digital Heroes Golf** — Subscription platform prototype: rolling-index scoring at the database layer, weighted prize draws and Razorpay in test mode | golfheros.vercel.app

EDUCATION & PUBLICATION

B.Tech, Electronics & Communication Engineering — MIET, Meerut, UP *Jul 2022 – Jun 2026*

- Co-author, "Automated Dual-Spot Wireless Charging and Parking Management System for Electric Vehicles", JETIR, Vol 13 Issue 4, April 2026 (Paper ID JETIR2604872).
